

Answer 3) Tsunami causes a lot of devastating effects on nature & human life.

The major effects of a tsunami are

↳ Destruction

↳ Death

↳ Disease

↳ A major environmental impact on animals, birds & humans.

↳ Buildings & bridges & infrastructures and other objects are carried away by the tsunami.

↳ They also hit small islands which are then left unrecognizable.

↳ Hundreds & ~~thous~~ thousands of people are killed by tsunami.

↳ Stagnant water becomes the breeding place for mosquitoes which spreads diseases like malaria.

↳ Many sea & land animals lost their lives due to tsunami.

↳ Not just this but the habitats of ~~an~~ animals are also destroyed.

Major Reasons for occurrence of tsunami are:-

↳ Caused by earthquake, volcanic eruption & other underwater explosions such as detonations, landslides, glaciers calving, meteorite impacts, and other man-made disruptions above or below water.

- ↳ The movement of a large amount of water or the perturbation of the sea is the primary cause of a tsunami.
- ↳ The movement of earthquakes, landslides, volcanic eruptions, ice calvings and more rarely, meteorites and nuclear tests are all accounted for the water displacement.
- ↳ Mostly Earthquakes are the cause of ~~the~~ tsunami that occurs worldwide.

Impacts of Tsunami on the environment are:-

- ↳ Tsunamis not only kill humans, but also wipe out insects, live livestock, plants & natural resources.
- ↳ The landscape is changed by a tsunami, It uproots trees & plants as well as animals habitats including bird nesting sites.
- ↳ Drowning kills land animals & waste kills sea animals when toxic substance are washed into the sea, poisoning marine life.
