

Cyclone

In meteorological terms, a cyclone is a wind device that rotates inwards (counter-clockwise in the Northern Hemisphere and clockwise in the Southern) around a robust low-stress center. Simply positioned, d-spiraling winds that rotate about a low-pressure quarter is known as a cyclone. Generally, when winds upward thrust above 118 kmph, it is known as a cyclone.

Impact of Cyclone:

- Strong winds cause damages to infrastructure, uproots trees, and lead to other catastrophes.
- Torrential rainfall leads to unprecedented floods and damages to houses and buildings.
- Due to storm surge, seawater levels rise, and the coastal areas are exposed to floods.
- The rise in seawater level also erodes beaches and embankments.
- Severe cyclonic storms resulting in floods can damage vegetation and livestock.
- Due to the strong winds and flood conditions, the soil becomes infertile.

OBJECTIVE

- To protect and minimize the loss of lives and property/ infrastructure from cyclones.
- To minimize the suffering of people due to cyclones.
- To build the capacity of all stakeholders in the State to cope with the cyclones and promote community based disaster management.
- Develop efficient cyclone response/relief mechanism in the State.
- To provide clarity on roles and responsibilities for
- all stakeholders concerned with cyclone management.
- To ensure co-ordination by promoting productive partnership with all other agencies related to cyclone management.

ACTION-PLAN

Pre-Cyclone Preparations:

- Check the house
- Secure loose tiles and carry out repairs of doors and windows
- Remove dead branches or dying trees close to the house
- Anchor removable objects such as lumber piles, loose tin sheets, loose bricks, garbage cans, sign-boards etc. which can fly in strong winds.
- Keep some wooden boards ready so that glass windows can be boarded if needed.
- Keep a hurricane lantern filled with kerosene, battery operated torches and enough dry cells.
- Demolish condemned buildings.
- Keep some extra batteries for transistors.
- Keep some dry non-perishable food always ready for use in emergency.

When cyclone alerts and warnings are communicated:

- Listen to the radio (All India Radio stations give weather warnings).
- Keep monitoring the warnings. This will help you prepare for a cyclone emergency.
- Pass the information to others. Ignore rumour and do not spread them; this will help to avoid panic situations.
- Believe in the official information.
- When a cyclone alert is on for your area continue normal working but stay alert to the radio warnings.
- Stay alert for the next 24 hours as a cyclone alert means that the danger is within 24 hours.

When Cyclone Hits:

- Drink only treated or boiled or chlorinated water! Chances of outbreaks of waterborne diseases increase drastically after cyclones and the resultant flooding events.
- Stay indoors until the danger has completely passed. If you are in an emergency shelter, remain there until informed by district authorities that you may return home.
- Clear your house and premises of debris immediately. Do not enter damaged buildings. Keep away from the disaster-hit areas unless you are required to aid and assist.
- Watch out for broken electric poles, wires and other sharp objects. Any loose and dangling wires from the lamp post should be strictly avoided, as they may have electric current.
- Avoid driving immediately after the cyclone has passed. If you have to drive, do it carefully. Get inoculated against diseases immediately.
- Do not step into waterlogged areas since chances of electrocution, reptile bites and injuries remain high.
- See if there are any animals in distress around your area. Help them to safety. Clear any and all water stagnation around your locality to avoid the spread of vector-borne diseases.
- Keep an eye out for anti-social elements. Any such activities should be prevented and reported to the police immediately.
- Report the losses to the appropriate authorities.
- Be calm. Your ability to meet emergencies, even after the disaster has passed, will inspire and help others.
